

Manual vices for extinguishers

VIF Series

TO GUARANTEE THE BEST
FIRE EXTINGUISHER MAINTENANCE

APPLICATIONS

VIF series manual vices are suitable for all portable extinguisher locking operations during their maintenance or refilling. These vices are available in three versions. The standard version (VIF model) which can be used mounted on a workbench or “free”.

Two special versions are also produced: model VIF/BIL, to block extinguishers on a scale and the Swinger model, used for 360° extinguisher rotation.

ADVANTAGES

Fastening holes allow the VIF to be secured to a work-bench or to other surfaces. Clamping does not require any power supply and it is always fast and easy.

The rubber covering the vice jaws ensures a perfect grip without damaging the external surface of the extinguisher. VIF/BIL model enables CO₂ portable extinguishers to be blocked on the filling scale. The rotating model, called Swinger, is particularly suitable for extinguisher testing because it allows the extinguisher to be safely rotated to 360°.
